SUMMARY

Software engineer with over a decade on production systems in Ruby and Python. Specialty: knowing whether they actually work. Monitoring, error ownership, checks that make AI output verifiable at scale. Doctorate in questioning assumptions.

TECHNICAL SKILLS

Languages: Ruby, JavaScript, Python **Testing:** RSpec; Testing Library, Jest; Pytest
Front End: React, GraphQL, Apollo, SCSS **Web Frameworks:** Rails, FastAPI, Flask
Database: ActiveRecord, PostgreSQL, SQLAlchemy **Infra:** Docker, Kubernetes, AWS, Terraform

EXPERIENCE

OMADA HEALTH San Francisco, California
Staff Software Engineer 2026–

- Leading rollout of per-file code ownership for a nine-team monolith: a structural fix for a codebase where production bugs, logs, and alerts had no accountable team and issues were routinely lost.

Senior Software Engineer 2022–2026

- Team lead of core monolith stability team. Identified & fixed background jobs that had been paging weekly. Introduced Datadog health monitoring framework.
- Converted >400 legacy JavaScript tests off Enzyme by scripting Claude Opus to rewrite them one at a time, re-running each test and re-prompting until it passed.
- Backfilled >200 million records for a database encryption effort. Traced repeated out-of-memory crashes in Datadog to the job architecture, rebuilding it as three tiers of nested workers enqueueing by integer ID to keep memory bounded.
- Built out a greenfield webhook integration with a drug-prescribing partner, owning its observability: the Datadog dashboards and monitors that confirmed prescriptions were flowing end to end.
- Built the Python/FastAPI ingest service and Terraform-provisioned SNS pipeline behind an ML message-classification system.
- Spent six months on a Python/Flask and React/TypeScript app, leading a project to merge its signup flow with that of the main Rails application.

Software Engineer 2019–2022

- Feature-led an overhaul of the care platform timeline: established the architecture, denormalized the database, and backfilled >5 million records bug-free.
- Feature-led integration of legacy signup features into the current signup flow, driving a >11% enrollment increase.

COVERHOUND San Francisco, California
Software Engineer 2016–2018

- Built CoverHound's greenfield in-house CRM as one of three engineers, including the REST APIs through which it and the main application communicated.

AVANT Chicago, Illinois
Software Engineer 2016

FLORIDA STATE UNIVERSITY Tallahassee, Florida
Graduate Instructor & Teaching Assistant, Philosophy 2007–2015

EDUCATION

DEV BOOTCAMP, Chicago, Ill., 19-week intensive web development course, 2015

FLORIDA STATE UNIVERSITY, Tallahassee, Fla., **Ph.D., Philosophy**, 2015; **M.A., Philosophy**, 2009

TRUMAN STATE UNIVERSITY, Kirksville, Mo., **B.A., Philosophy and Religion**, 2007
